

Web Architecture

Layers, Languages, Protocols

Fulvio Corno
Luigi De Russis
Enrico Masala

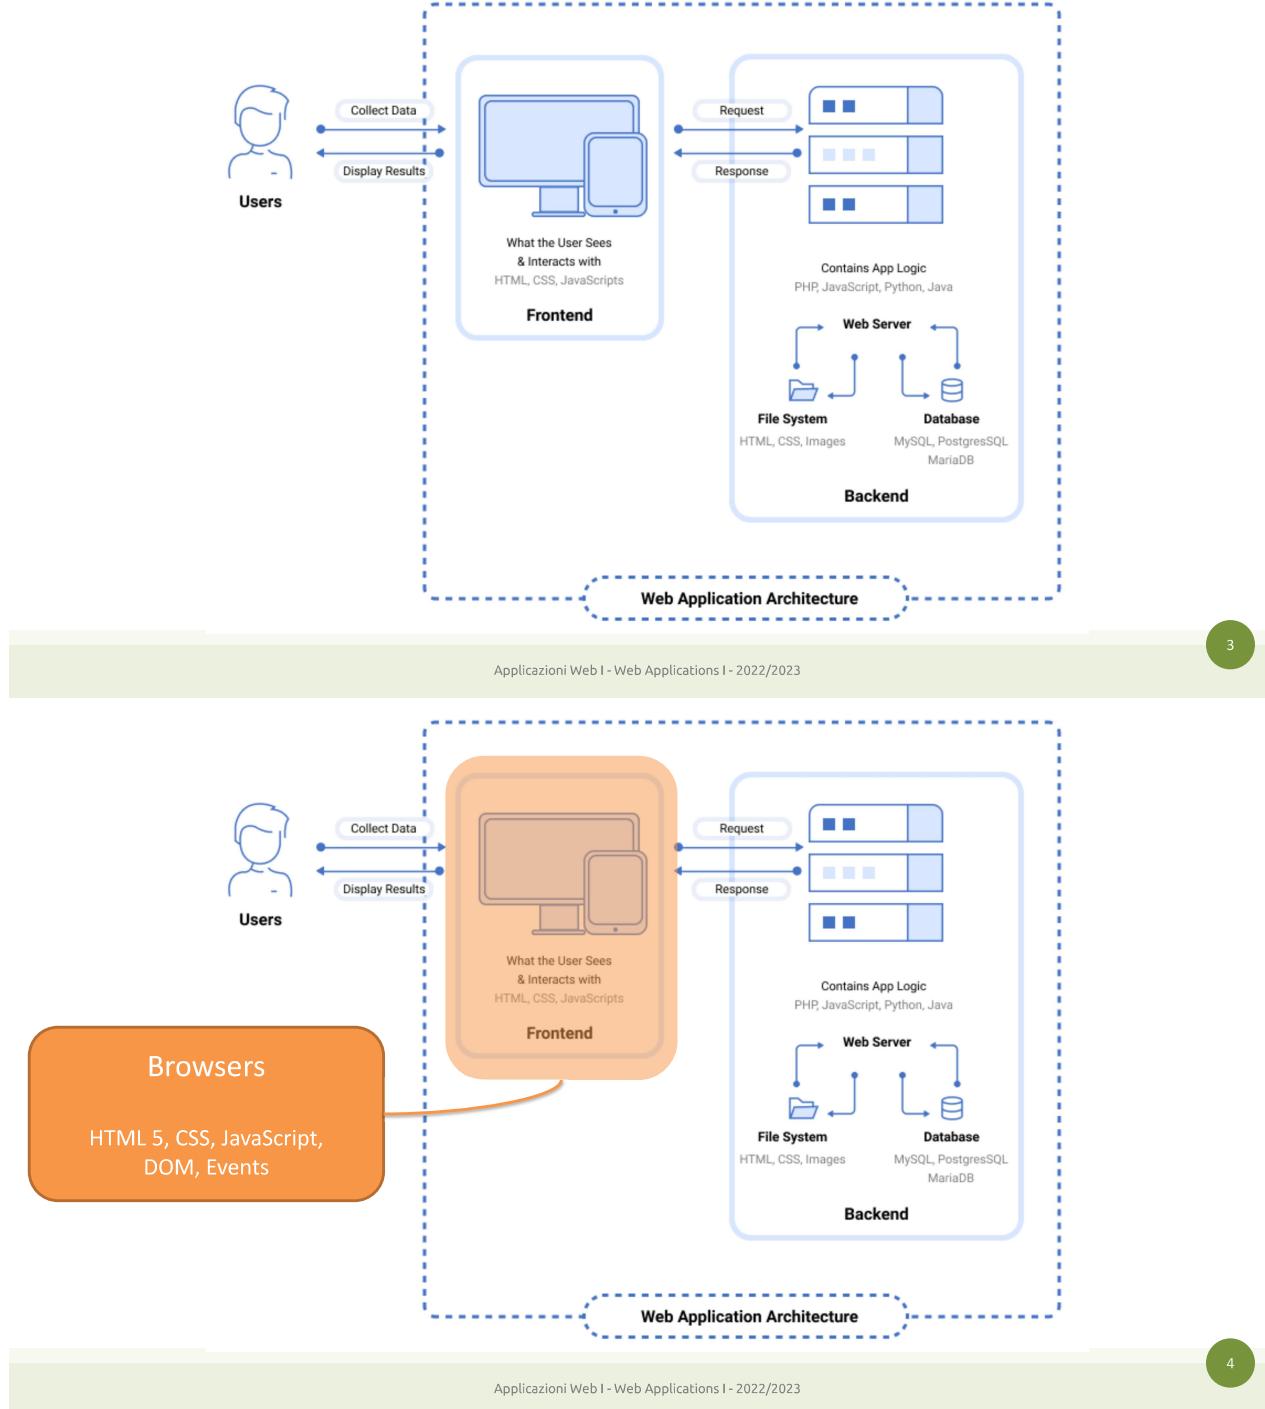

Applicazioni Web I - Web Applications I - 2022/2023

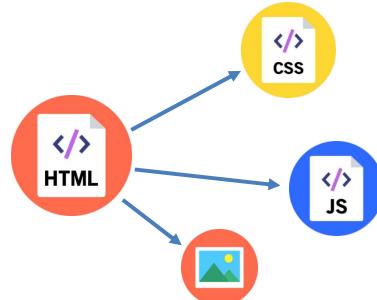

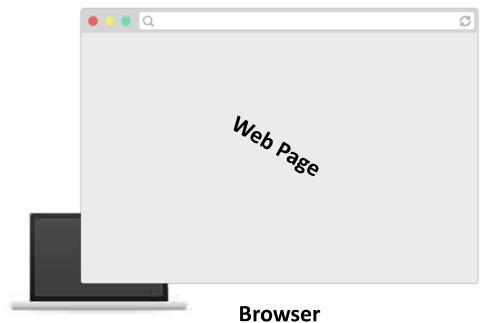

Goal

- Understand what is the Web and its architecture
 - main (logical) components
 - main network protocols
 - existing architectural patterns and languages
 - Know the interaction and communication across components
 - Learn the basics of how a browser works
-
- *NOTE: All the topics mentioned here will be presented in more details in the next lectures*

Browser

The HTML file might link to other **resources** (images, videos, ...) as well as **JavaScript** and **CSS** files, which the browser then also loads

These are stored or generated by a **server**

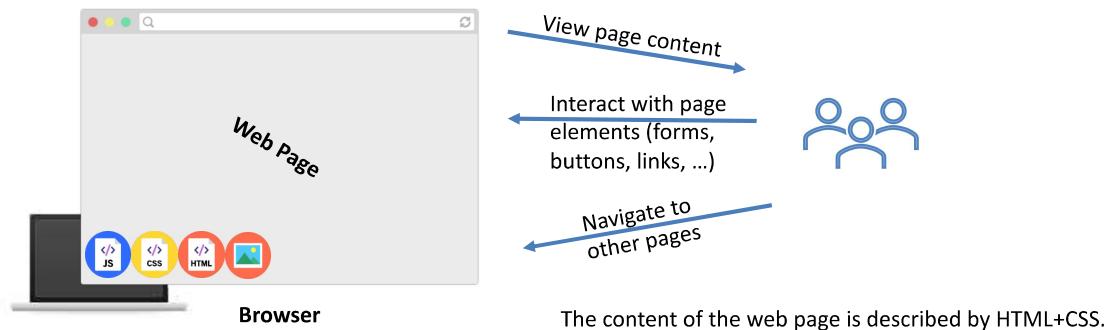

A screenshot of a course page from a learning management system. The title bar reads "Applicazioni Web I - Web Applications I - 2022/2023". A green circular badge with the number "5" is visible in the top right corner. The main content area shows a module titled "Introduction to HTML" with a brief description and a "Selected" button.

Quick Introduction to HTML

A screenshot of the Mozilla Developer Network article titled "Introduction to HTML". The page includes a table of contents, a "Prerequisites" section, and a "Guides" section. At the bottom, a blue footer bar displays the URL: https://developer.mozilla.org/docs/Learn/HTML/Introduction_to_HTML.

A screenshot of a course page from a learning management system. The title bar reads "Applicazioni Web I - Web Applications I - 2022/2023". A green circular badge with the number "6" is visible in the top right corner.

Browser

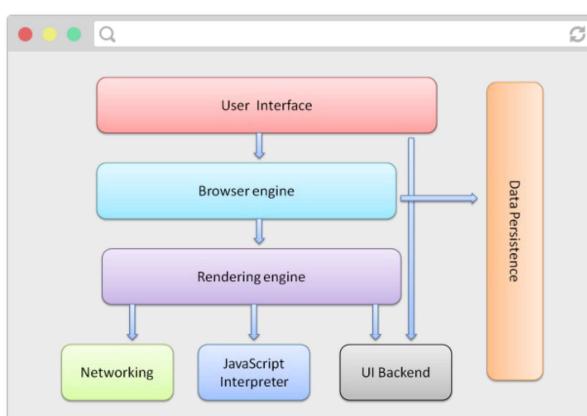

Clicking on a link brings the user to a **new page**.
Interacting with other elements may generate **Events** inside the browser.
Such Events are “captured” by JavaScript and may **update the page content**.

7

Applicazioni Web I - Web Applications I - 2022/2023

Conceptual Browser Architecture (from 10,000 feet)

- **User Interface:** the address bar, back/forward button, bookmarking menu, etc. Every part of the browser display except the window where you see the requested page
- The **Browser Engine** marshals actions between the UI and the rendering engine
- The **Rendering Engine**: responsible for displaying the requested content. For example, if the requested content is HTML, the rendering engine parses HTML and CSS, and displays the parsed content on the screen
- **Networking:** for network calls such as HTTP requests, using different implementations for different platform behind a platform-independent interface
- **UI Backend:** used for drawing basic widgets like combo boxes and windows. This backend exposes a generic interface that is not platform specific. Underneath it uses operating system user interface methods
- **JavaScript Interpreter:** used to parse and execute JavaScript code
- **Data Persistence:** a persistence layer. The browser may need to save all sorts of data locally, such as cookies. Browsers also support storage mechanisms such as LocalStorage, IndexedDB, WebSQL and FileSystem

8

Applicazioni Web I - Web Applications I - 2022/2023

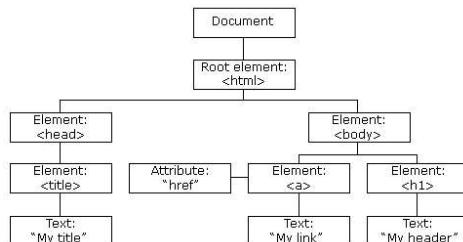

Browser Development tools

The screenshot shows the developer tools of a web browser (likely Chrome) open over a page from the ScuDo website. The top tab bar includes tabs for 'Source', 'Inspector', 'Console', 'Debugger', 'Network', 'Storage', 'Performance', 'Memory', 'Accessibility', 'Applications', and 'JavaScript Plan'. The 'Inspector' tab is active, displaying the DOM tree. The 'Console' tab shows several warning messages related to CSS properties like 'transform-origin' and 'border-radius'. The 'Network' tab shows a list of requests and responses. The 'Elements' panel shows the current state of the DOM, and the 'Styles' panel shows the computed styles for selected elements.

Document Object Model (DOM)

- Standard **data structure** for representing the web page content
- Allows to get, change, add, or delete HTML elements
- Supported by all browsers
- **JavaScript programs can read and modify the DOM**
- Abstracts and standardizes APIs to
 - Browser
 - HTML

"The W3C Document Object Model (DOM) is a *platform and language-neutral interface* that allows programs and scripts to dynamically access and update the content, structure, and style of a document."

Cascading Style Sheets (CSS)

- Allow the definition of complex layouts
- Adapt web pages to
 - different resolutions
 - different devices (e.g., smartphones)
 - different preferences (e.g., color schemes)
 - to different media (e.g., text vs. video)
 - in a standard way

11

Cascading Style Sheets (CSS)

- A set of "*declarations*" applied to some "*selectors*"
 - Selectors identify portions of the DOM
 - Declarations set the value of some properties
 - Properties control everything
 - color, size, font, alignment, border, shadow, position, selection status, transitions, links, buttons, cursors, ...

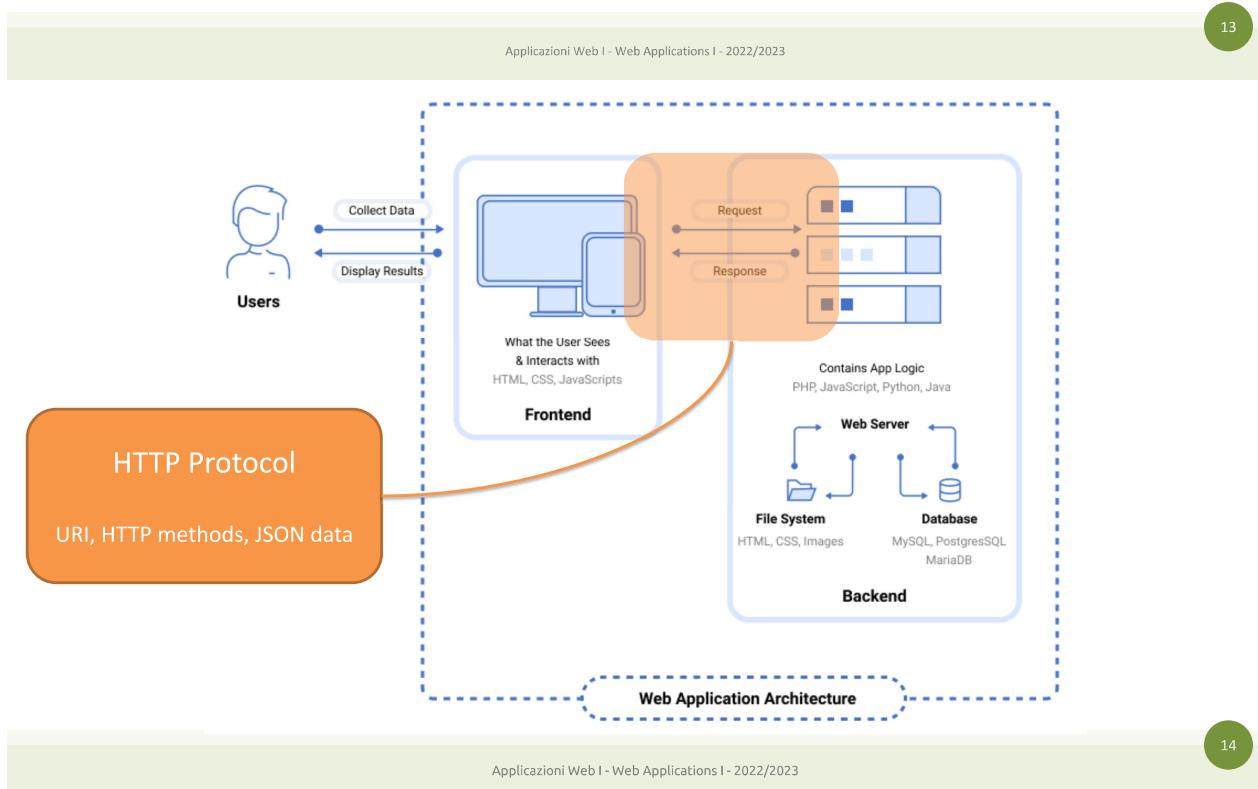

12

JavaScript

- JS Interpreter Embedded in the Browser
 - Executes within a strict “[sandbox](#)”
- JS Scripts loaded by the HTML page
 - `<script src="/js/myscript.js" type="text/javascript"></script>`
- JS Scripts have read-write access to
 - Browser API
 - HTML DOM (including form data)
 - User events and actions

HTTP protocol

RFC 2616, RFC 2617
http://www.w3.org/Protocols

```
GET / HTTP/1.1
Host: www.polito.it
User-Agent: Mozilla/5.0 (Windows NT 10.0; Win64; x64; rv:86.0) Gecko/20100101 Firefox/86.0
Accept: text/html,application/xhtml+xml,application/xml;q=0.9,image/webp,*/*;q=0.8
Accept-Language: en-US,en;q=0.5
Accept-Encoding: gzip, deflate, br
DNT: 1
Connection: keep-alive
Cookie: __utma=55042356.701936439.1606736391.1615238467.1615289682.230; __utmz=55042356.1615289682.230.1.utmcsr=www.google.it|utmccn=(referral)|utmcmd=referral|utmctr=(not provided)
Upgrade-Insecure-Requests: 1
Pragma: no-cache
Cache-Control: no-cache
```

[HTTP Request]

HTTP protocol

RFC 2616, RFC 2617
http://www.w3.org/Protocols

```
GET / HTTP/1.1
Host: www.polito.it
User-Agent: Mozilla/5.0 (Windows NT 10.0; Win64; x64; rv:86.0) Gecko/20100101 Firefox/86.0
Accept: text/html,application/xhtml+xml,application/xml;q=0.9,image/webp,*/*;q=0.8
Accept-Language: en-US,en;q=0.5
Accept-Encoding: gzip, deflate, br
DNT: 1
Connection: keep-alive
Cookie: __utma=55042356.701936439.1606736391.1615238467.1615289682.230; __utmz=55042356.1615289682.230.1.utmcsr=www.google.it|utmccn=(referral)|utmcmd=referral|utmctr=(not provided)
Upgrade-Insecure-Requests: 1
Pragma: no-cache
Cache-Control: no-cache
```

[HTTP Response]

HTTP Response Body

Generation

- Empty Response Body
 - Errors
- Static file (exists in the server)
 - HTML (seldom)
 - Images, JavaScript, CSS, ...
- Dynamically generated on-the-fly by the server
 - HTML (generated with templates)
 - JSON data

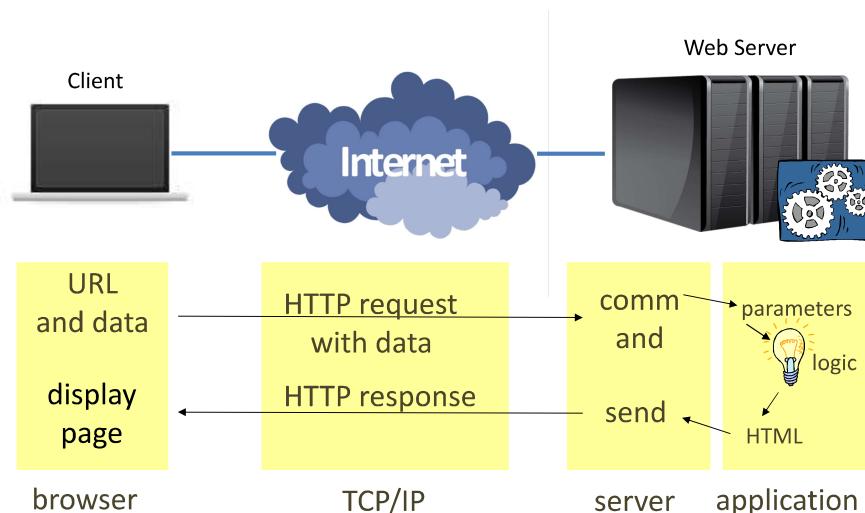

File and Content Type

- HTTP does not care about the meaning of the payload
- Web content
 - HTML, CSS, JS
 - Used by the [browser](#)
- Data content (API)
 - JSON, XML, binary data, ...
 - Used by [JavaScript](#) code

17

HTTP Methods

HTTP method	RFC	Request has Body	Response has Body	Safe	Idempotent	Cacheable
GET	RFC 7231	Optional	Yes	Yes	Yes	Yes
HEAD	RFC 7231	Optional	No	Yes	Yes	Yes
POST	RFC 7231	Yes	Yes	No	No	Yes
PUT	RFC 7231	Yes	Yes	No	Yes	No
DELETE	RFC 7231	Optional	Yes	No	Yes	No
CONNECT	RFC 7231	Optional	Yes	No	No	No
OPTIONS	RFC 7231	Optional	Yes	Yes	Yes	No
TRACE	RFC 7231	No	Yes	Yes	Yes	No
PATCH	RFC 5789	Yes	Yes	No	No	No

https://en.wikipedia.org/wiki/Hypertext_Transfer_Protocol#Request_methods

19

Applicazioni Web I - Web Applications I - 2022/2023

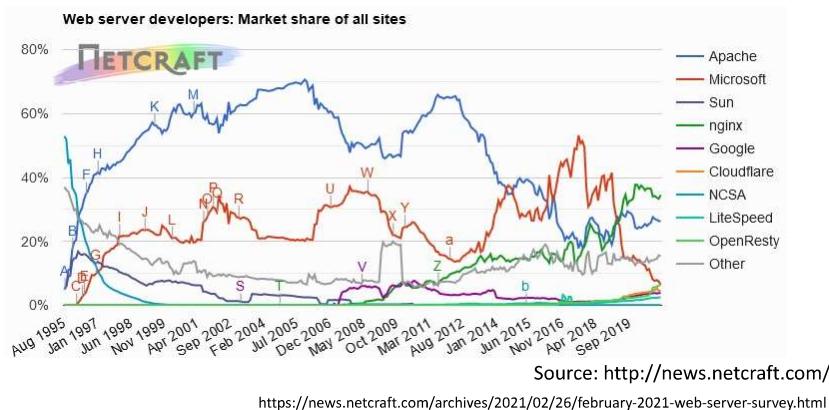

Web Server

- A web server delivers web resources in response to a request
 - manages the HTTP protocol to handle requests and provide responses
- It either **reads** or **generates** a web page
 - receives client requests
 - reads *static page* from the filesystem
 - asks the application server to generate *dynamic pages* (server-side)
 - provides a file (HTML, CSS, JS, JSON, ...) back to the client
- One HTTP connection for each request
- Multi-process, multi-threaded or process pool

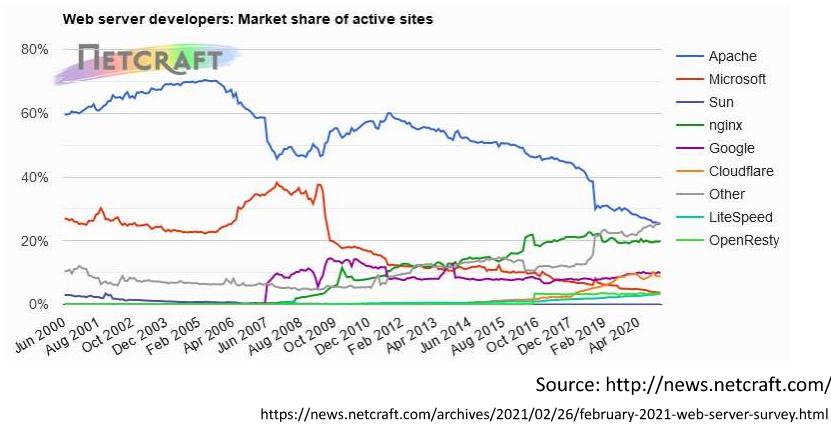

21

Web Server

22

Web Server

Applicazioni Web I - Web Applications I - 2022/2023

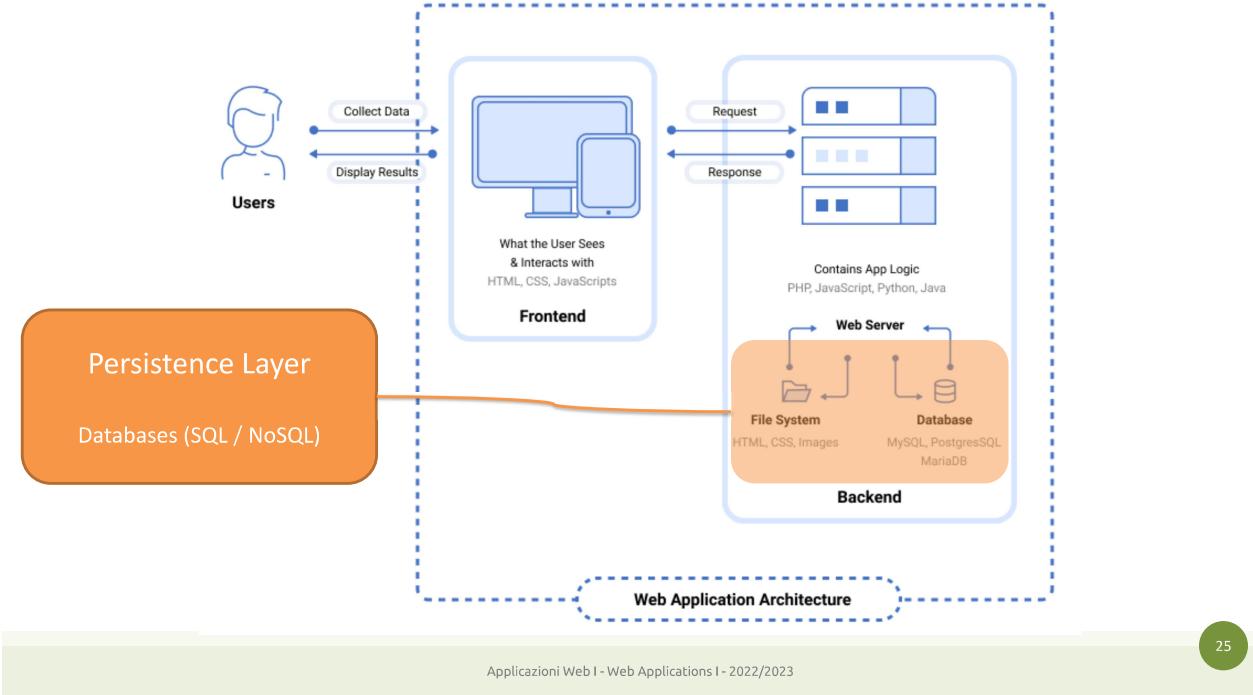

23

Web Server with Node.js

- Node.js provides a module '[http](#)' that implements a basic web server
- [Express](#): a simple and extensible web server, easy to extend with many available extensions - <http://expressjs.com/>
- Other alternatives:
 - [Fastify](#): focuses on performance
 - [Koa](#): by Express authors, simplifies callbacks using 'ES6 generators' (yield instruction)
 - [Meteor](#): full-stack, more complex and complete, also with a client-side component to synchronize state
 - [Sails.js](#): based on MVC+ORM principles
 - ... many more

Applicazioni Web I - Web Applications I - 2022/2023

24

Web Architecture

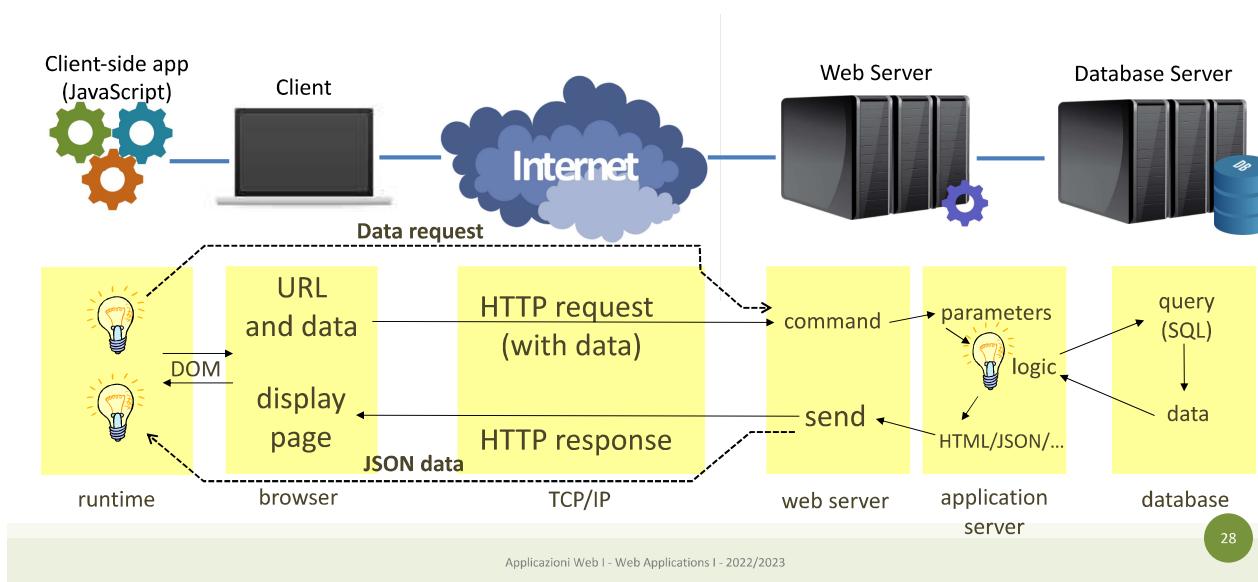

ARCHITECTURAL PATTERNS

"Traditional" Architectural Pattern

- The "Rich-Client" is the "traditional" approach, now
- The server sends a new HTML page for each request it receives
 - with related resources (i.e., images, CSS, ...)
 - some parts of those pages can be, then, dynamically updated with asynchronous JavaScript requests
- A web application is doing **server-side rendering**, and a *multi-page* web application is created

All The Layers At Work...

Modern Patterns

Other three patterns to architect a web application exist, roughly

1. Single-Page Application (SPA)

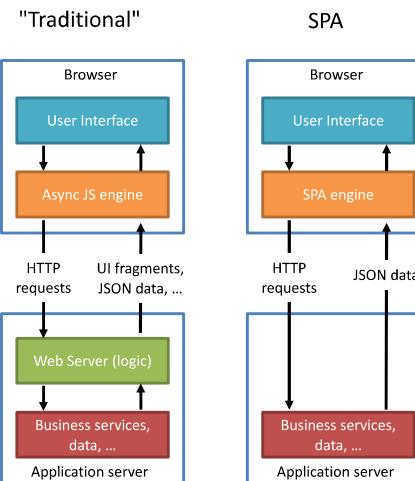

- the server sends the exact same web page for every unique URL
- the page runs JavaScript to change the content and the aspect
- by querying another (logical) server which provides "raw" information

29

Applicazioni Web I - Web Applications I - 2022/2023

Single-Page Application

- An *evolution* of the "traditional" approach
 - JavaScript starts with an (almost empty) HTML
 - add all the content dynamically
 - instead of asking for data to update some parts of a well-formed page
- Goal: to serve an outstanding User Experience with no page reloading and no extra time waiting
- Examples: Google Docs, Trello

30

Applicazioni Web I - Web Applications I - 2022/2023

SPA: Disadvantages

- Search Engine Optimization (SEO) is hard
 - Google launched a new scheme to increase single-page app SEO optimization, but this means extra work for the developer
- Browser history is not working
 - Web History API exists to tackle this problem and to allow a developer to emulate the back and forth action
- Security issues
 - Given that "all the logic is in the client", special care should be taken when handling access control. Cross-Site Scripting (XSS) is a problem as well.
- Client-side rendering can be slow!

31

Applicazioni Web I - Web Applications I - 2022/2023

Modern Patterns

Other three patterns to architect a web application exist, roughly

1. Single-Page Application (SPA)

- the server sends the exact same web page for every unique URL
- the page runs JavaScript to change the content and the aspect
- by querying another (logical) server which provides "raw" information

2. Isomorphic Application

- Combination of SPA with server-side rendering

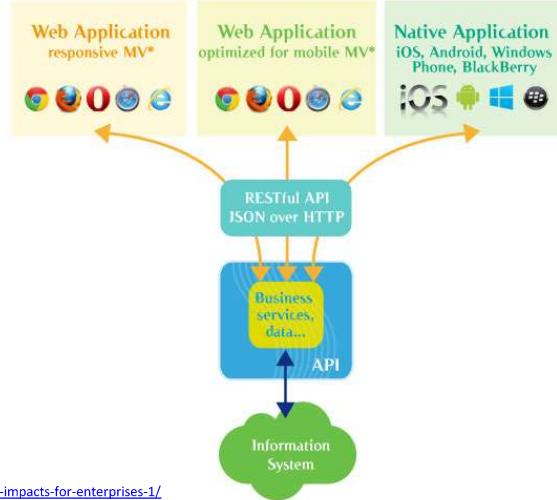

3. Progressive Web App (PWA)

- Web applications that emulate "native" apps

32

Applicazioni Web I - Web Applications I - 2022/2023
